Open the Lootlist homepage, log in. https://www.lootlistplus.com/master-sheet

Note: Every raider must create their loot list prior to the import, and this list must be approved beforehand; otherwise, the player will receive no loot or be skipped in the loot order for that specific raid.

1. Open the "Master Sheet" in the overview on the left.

2. In the upper right corner, click the "Export to Gargul" button. (This may take a while; keep in mind that a popup may appear in your browser with the message "The website is trying to copy something to the cache, do you want to allow this?" You should, of course, accept this.)

The next steps are then carried out directly within the game via Gargul.

1. Right-click the Gargul icon on the minimap and click the "TMB, DFT or PRIO3" button.
2. The import window opens; simply paste the string from your clipboard (or from Lootlist) here using Ctrl+V.

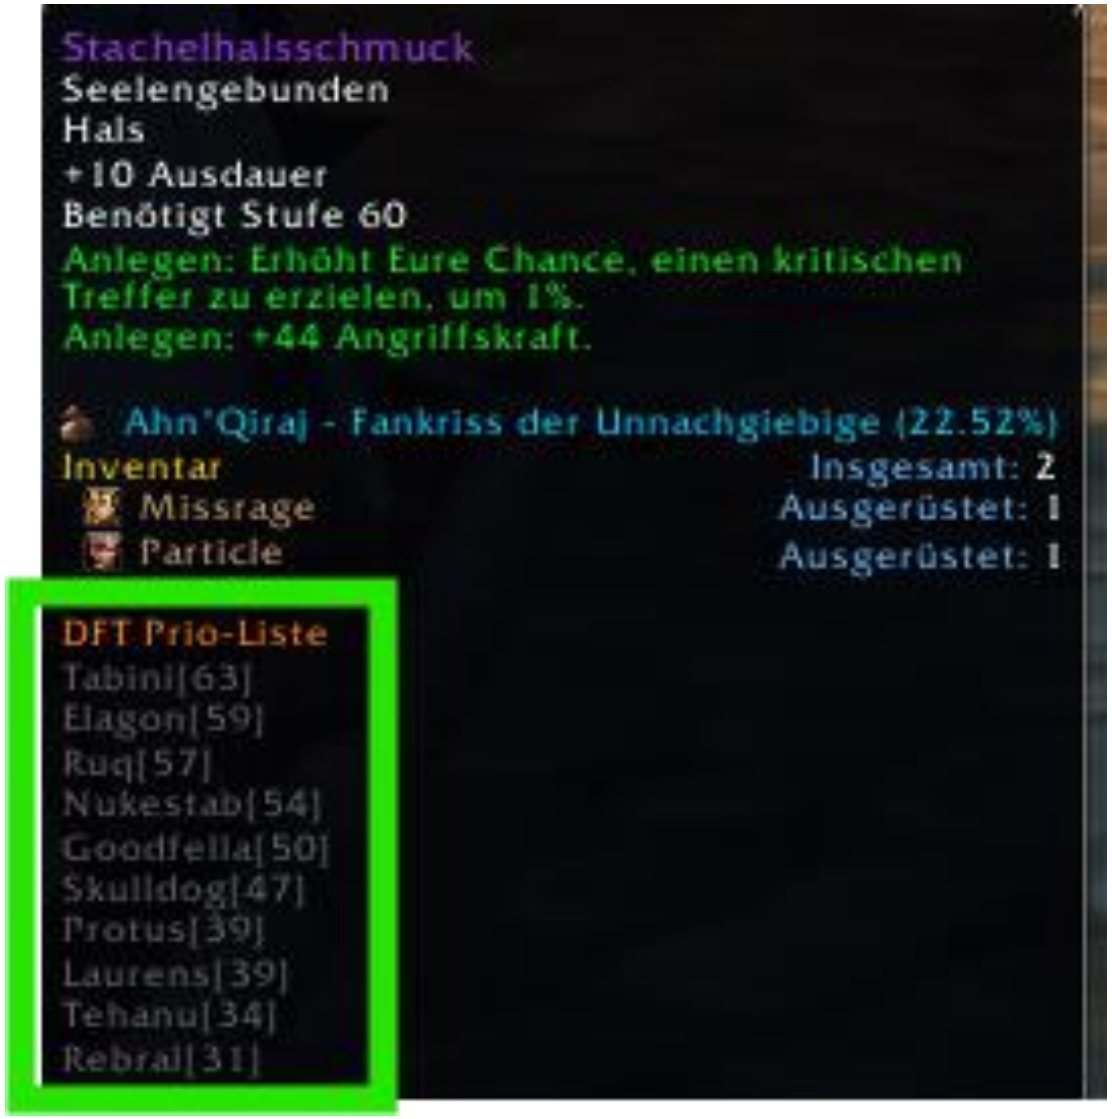

Press the import Button

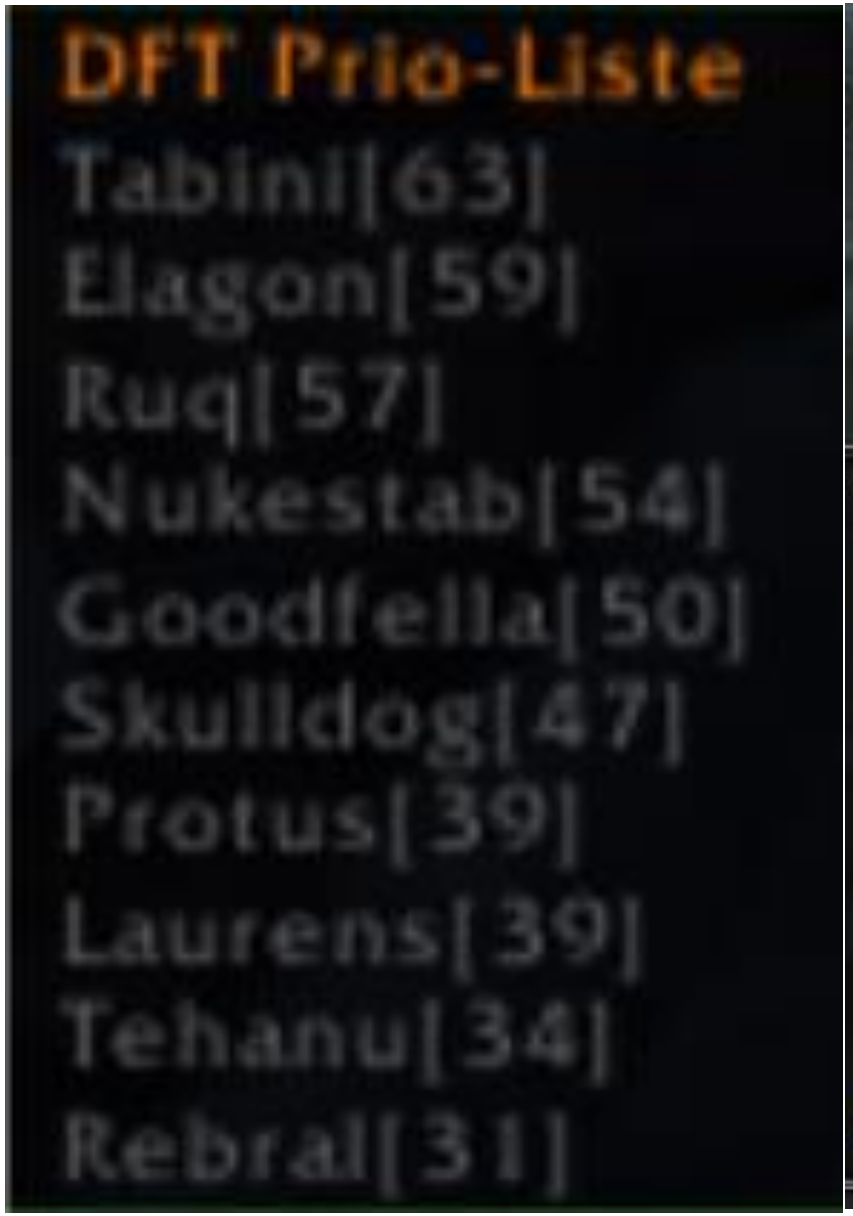

The following message then appears here as a final check.

You can now see the player's corresponding priority—or rather, their priority points—for each item. The player with the highest score "wins" the item; in other words, it is awarded to the player with the highest score.

You can then simply assign it within the inventory using the key combination Shift+Alt, or a separate window will open. It can be assigned to any player in the raid; the player with the highest score is always suggested and highlighted.

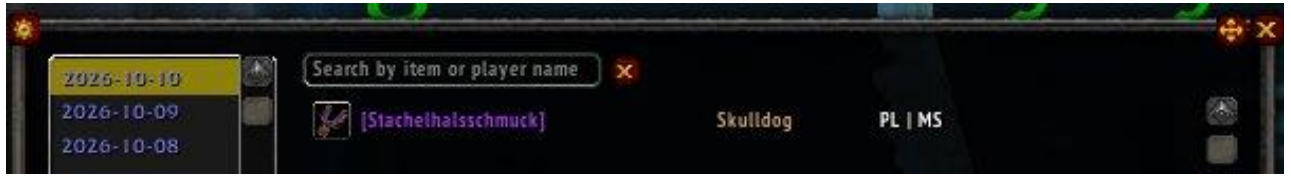

This is just an example; all players from the loot list are displayed, but the suggestion always applies to the player currently in the raid.

Afterwards, you can open the loot distribution interface by middle-clicking the gargul icon on the minimap (this is needed later to update the loot list on the website).

We are hereby preparing the export function for Lootlist.

The setting is briefly checked here again; the loot list only accepts a specific format.

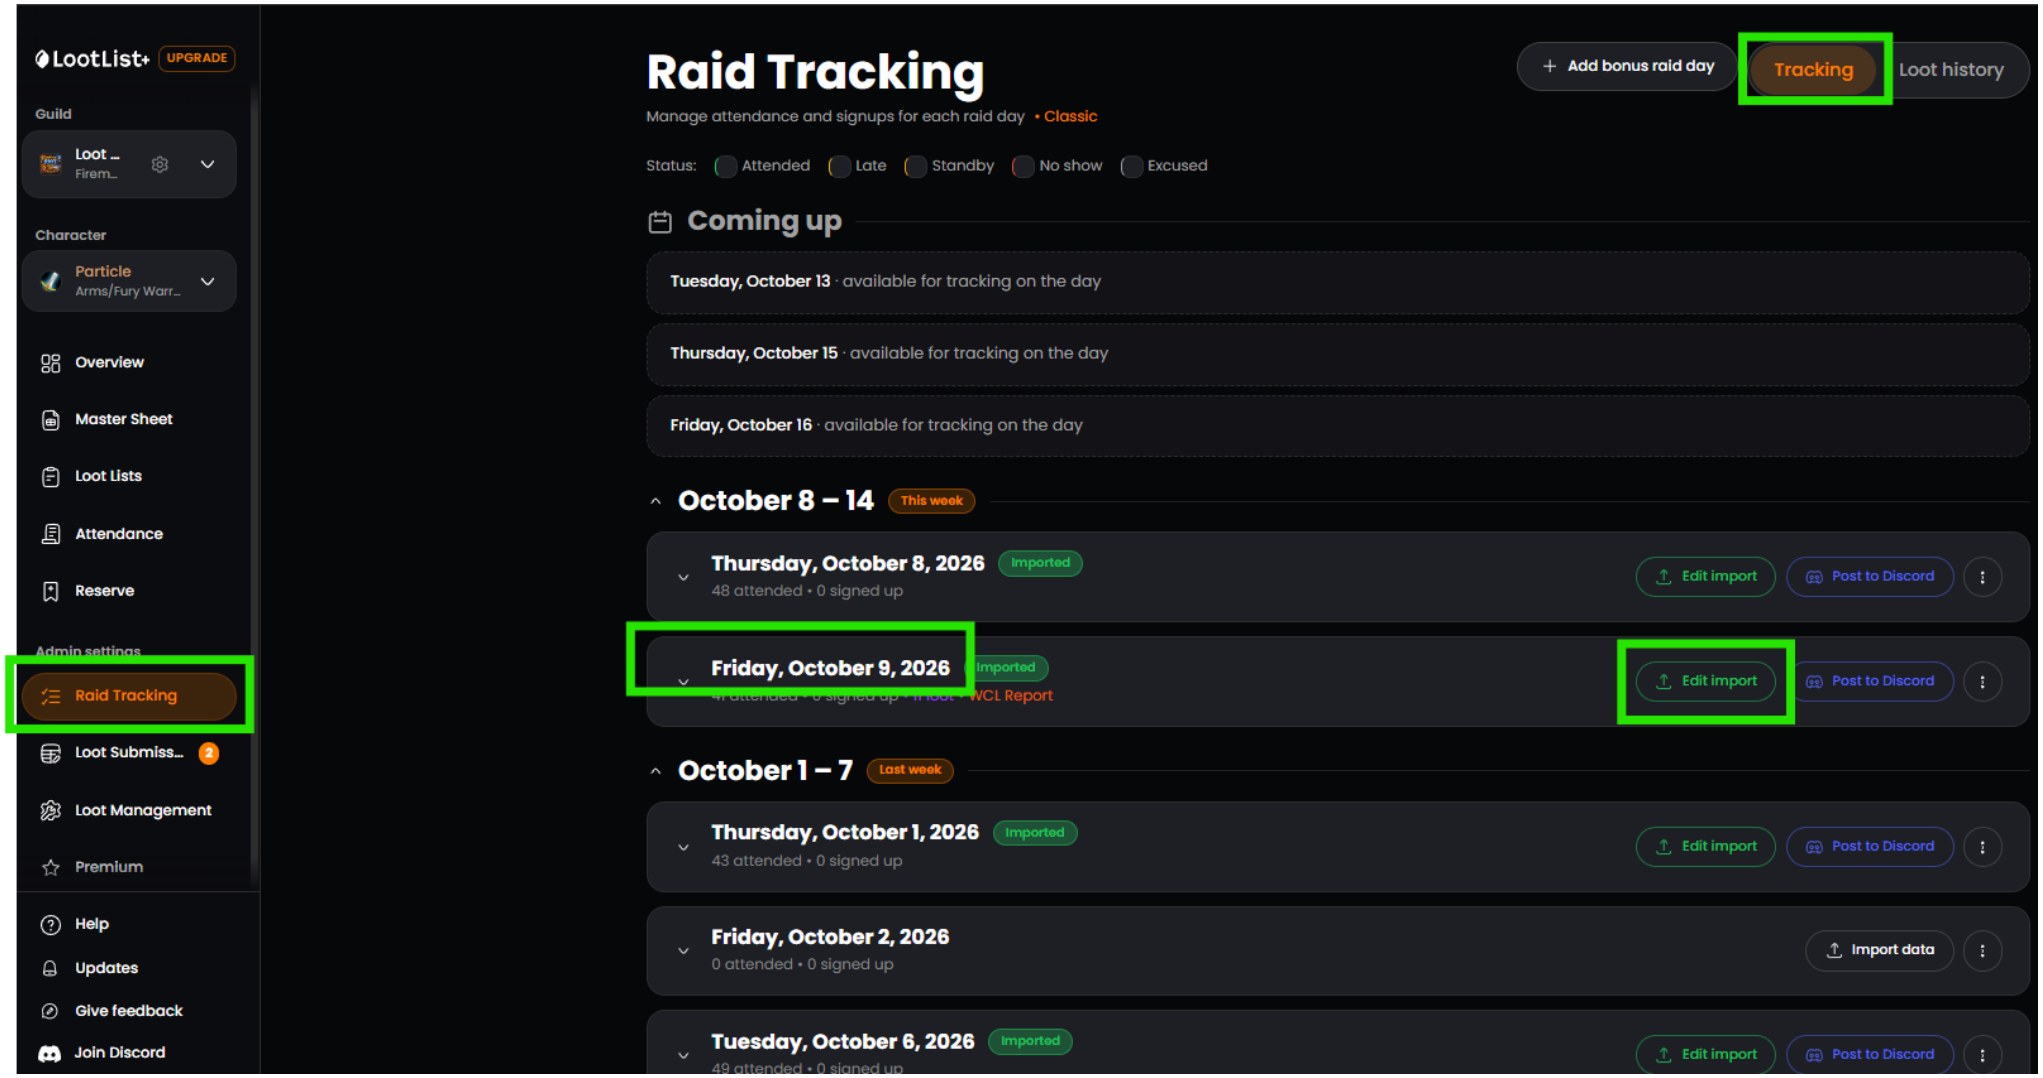

Choose "DFT-Fight-Club (EU date format)"

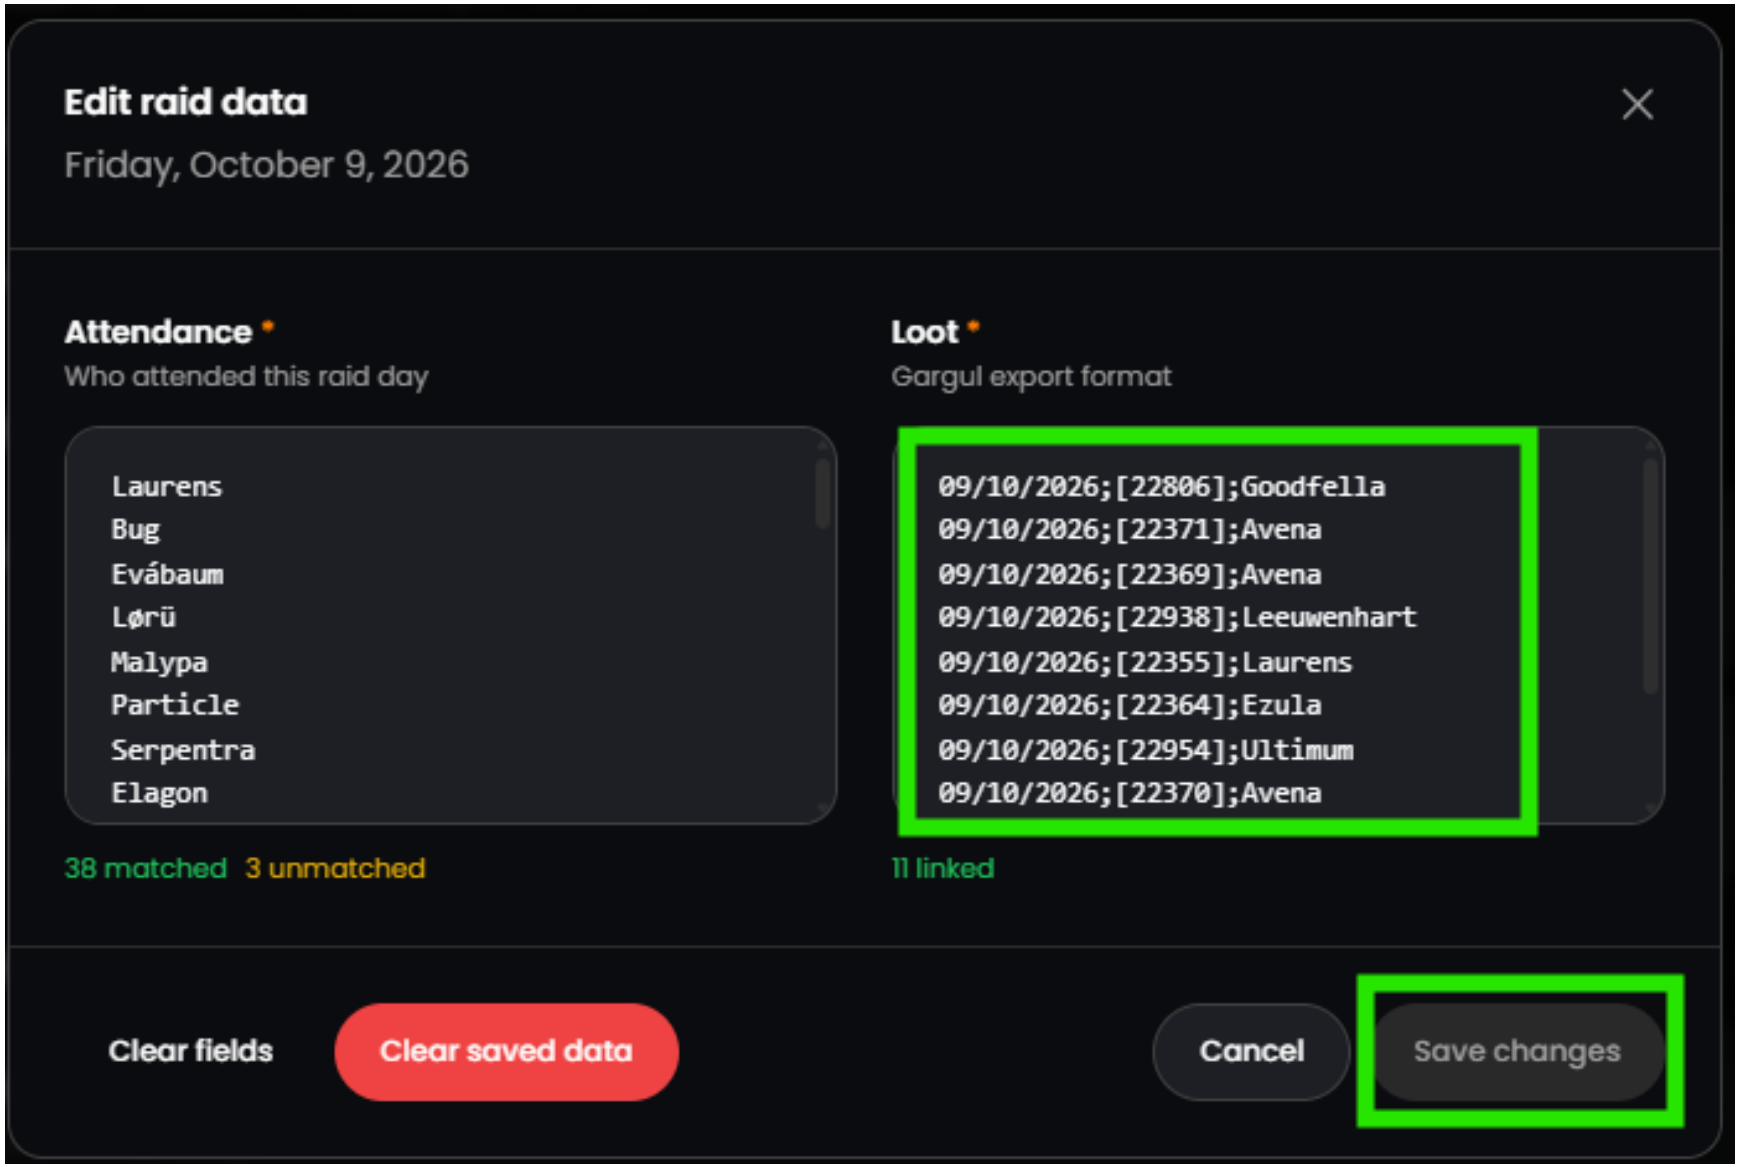

After we have rearranged it, the format should look like this. It can now simply be copied using the Ctrl+C function.

We go back to the Lootlist homepage and simply paste in what we copied earlier.

Once we have saved, everything is fully uploaded and the overview is updated.

In the end, an overview emerges showing who received what.
